Skills Origin — Origin to Master C

Assignment 1: Programming Fundamentals (Lecture 1 Concepts)

Student Name: _____	**Batch / Date:** _____

Practice Questions

1. **What is a Program?**
   Define a computer program in your own words. Explain how a set of instructions enables a computer to perform specific tasks.

2. **What is Software?**
   What do you understand by software? How does it serve as a bridge between computer hardware and the end user?

3. **Types of Software:**
   Classify software into its major categories (e.g., System Software, Application Software, Utility Software) and give two real-world examples of each.

4. **What is Programming?**
   Explain the concept of programming. Why is logical thinking considered the backbone of the programming process?

5. **What is Coding?**
   How is coding defined within the software development lifecycle? What role does syntax play when writing code?

6. **Programming vs Coding:**
   Differentiate clearly between "Coding" and "Programming". Is every coder a programmer? Justify your answer.

7. **What is a Programming Language?**
   What is a programming language, and how does it act as an intermediary medium of communication between humans and machines?

8. **Why Do We Need Programming Languages?**
   Why can we not directly instruct computers using natural human languages (like English or Hindi)? Explain the need for structured programming languages.

9. **Types of Programming Languages:**
   Distinguish between Low-Level Languages (Machine & Assembly) and High-Level Languages. Also, briefly explain the role of translators (Compilers and Interpreters).
